

With over 4 million models and 23 million users every year, 3D Warehouse is the world's largest and most popular repository of free 3D models. It is an open library where anyone using SketchUp Pro can download and share.

A community for all

Anyone can search, download models from, and contribute content to 3D Warehouse, for free. The world's largest 3D content platform features direct integration with SketchUp Pro and compatibility with CAD apps.

Sharing is caring

Not every model in 3D Warehouse has to be shared; private items are accessible only to you. Public models can be searched and downloaded. Models can be organised into collections and shared to social media.

Content marketing platform

3D Warehouse offers product manufacturers a unique way to showcase catalogs, allowing prospects to specify product into their own designs. The 3D model is a native channel to reach and engage new customers.

Certified content development

SketchUp has built a strong network of Certified Content Developers; together they are equipped to build professional models for those organisations seeking to get their content noticed on 3D Warehouse.

Visit 3DWarehouse.SketchUp.com and browse over 4 million models.
