

**The ideal solution for the rapidly
changing business market!**
See what's new in Server 2022!

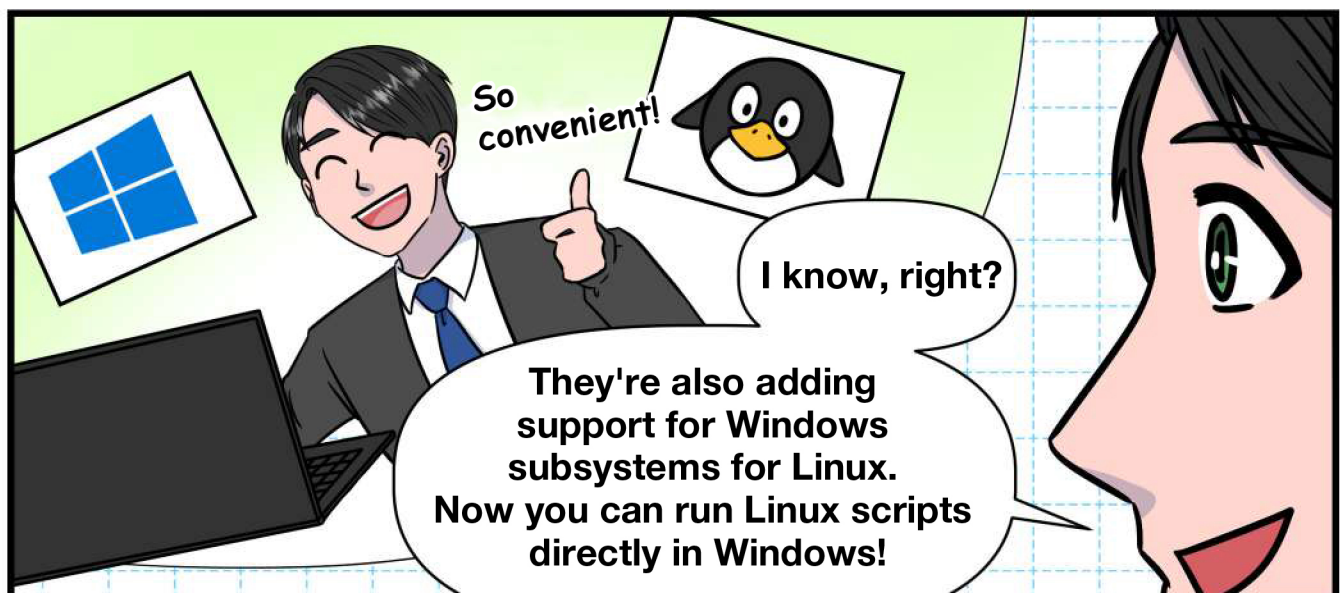

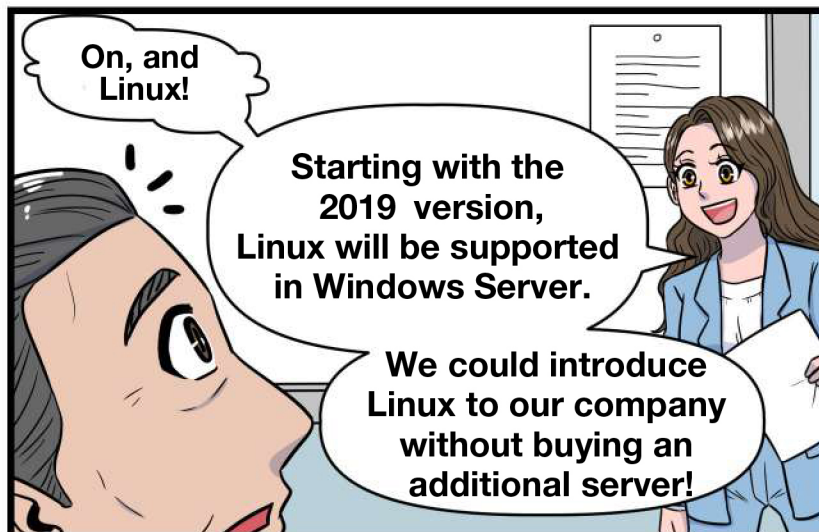

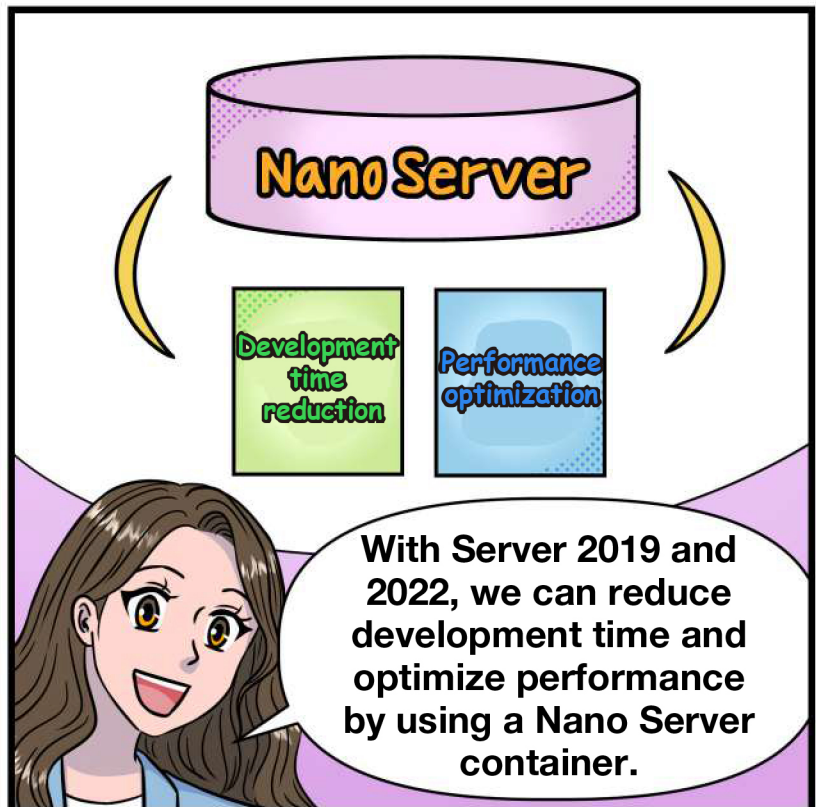

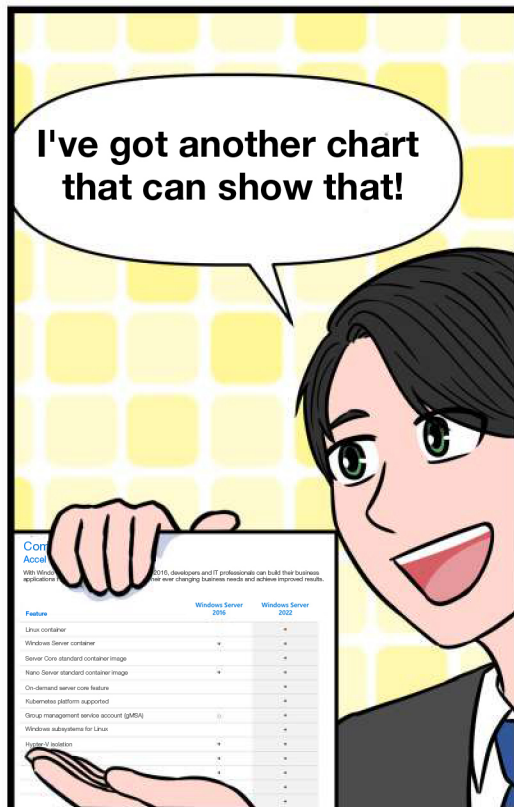

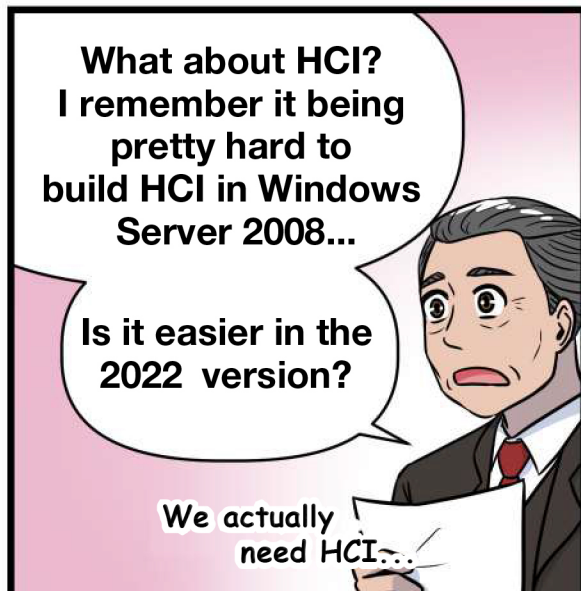

Windows Sever
2022

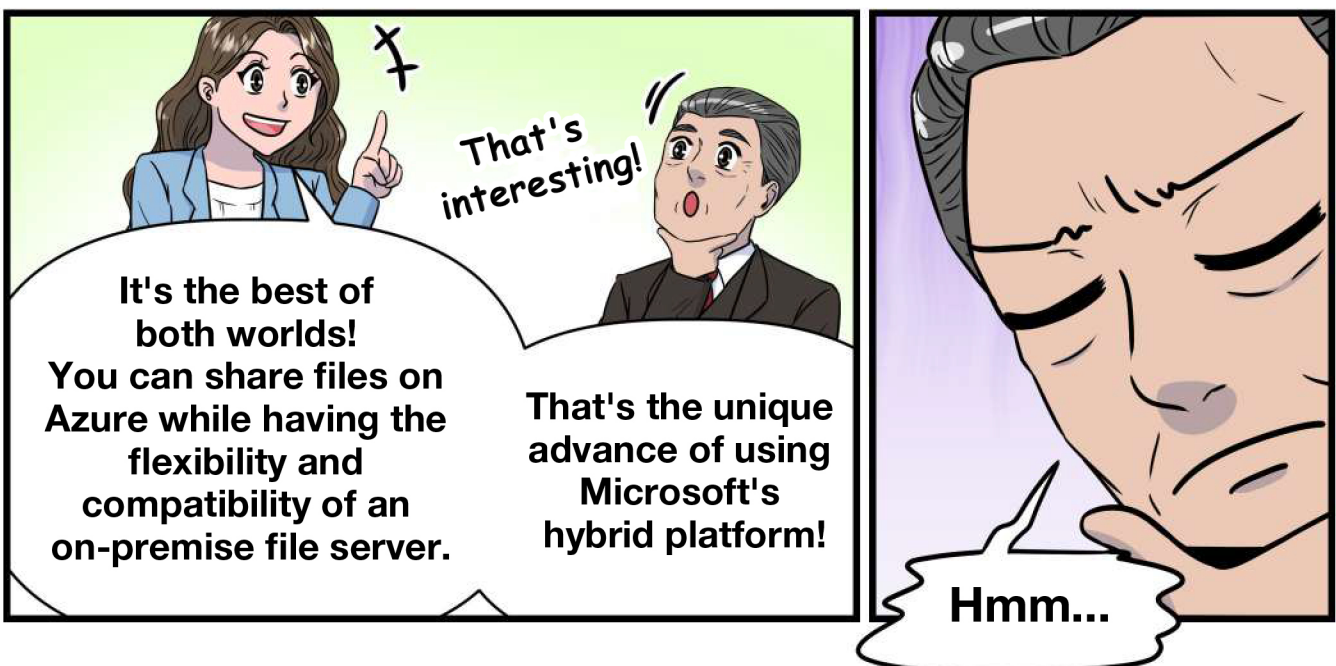

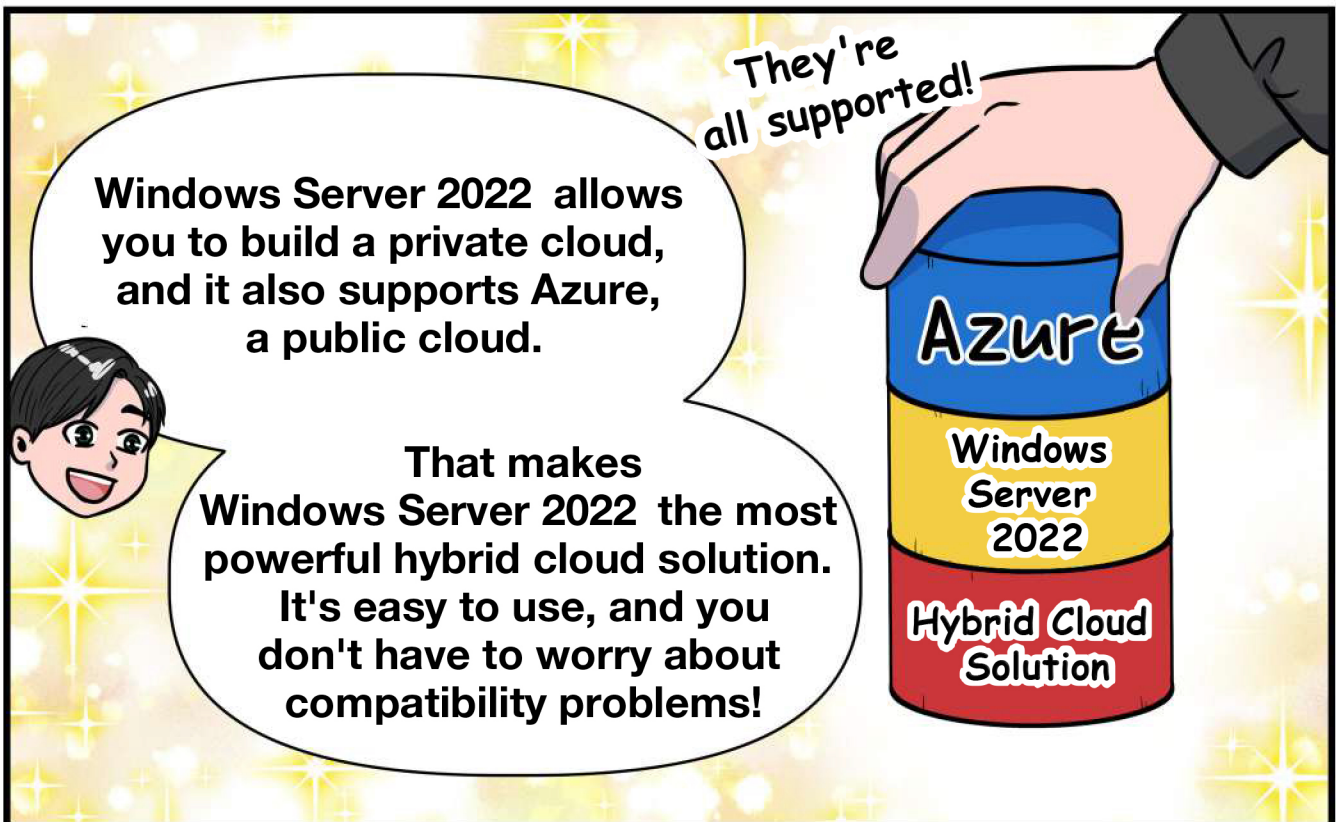

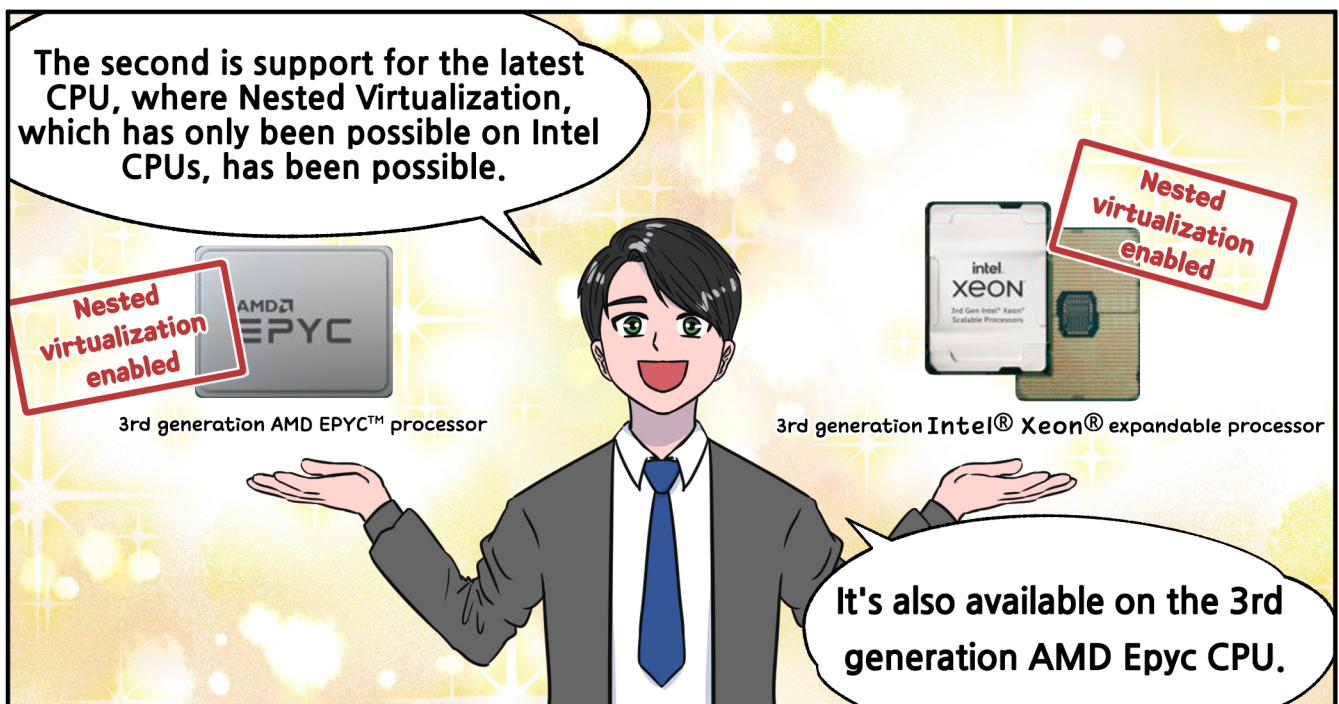

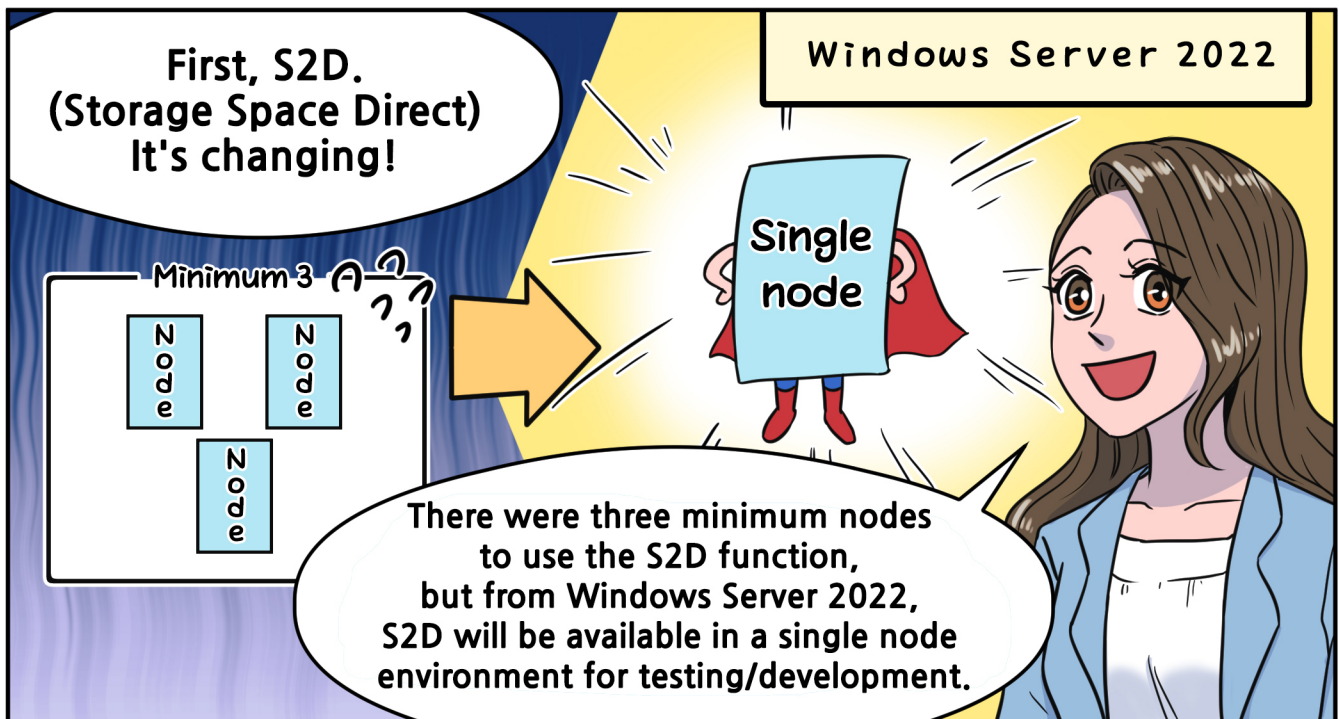

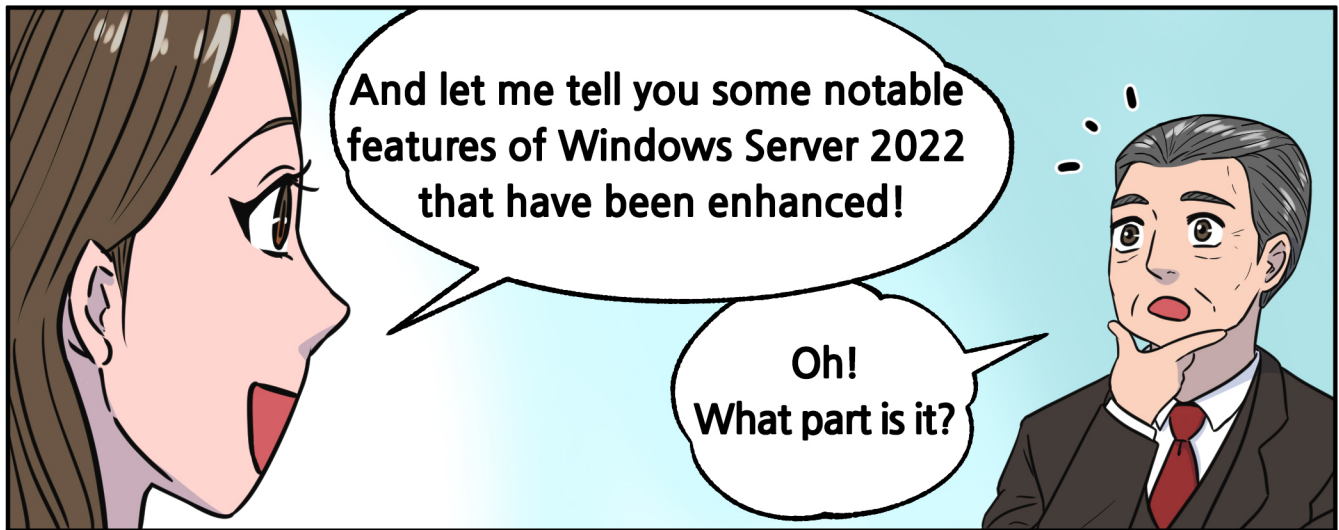

Third, support for containers continues to expand!

Containers

Nano Server Containers

Server Core Containers

- gMSA without domain joined host virtualized time zone CRI Containerization
- and HCS Integration Tigera Calico for
- Windows Improved scalability for overlay
- networking Containerization tools in
- Windows Admin Center DSR routing for
- overlay and l2bridge networks Writing YAML
- for AKS and AKS-HCI Deployments Smaller
- default container image size IPv6 Support
- for Windows Containers Multi-subnet
- support for Kubernetes worker nodes Azure
- Migrate app containerization

Continuous development/Improvement

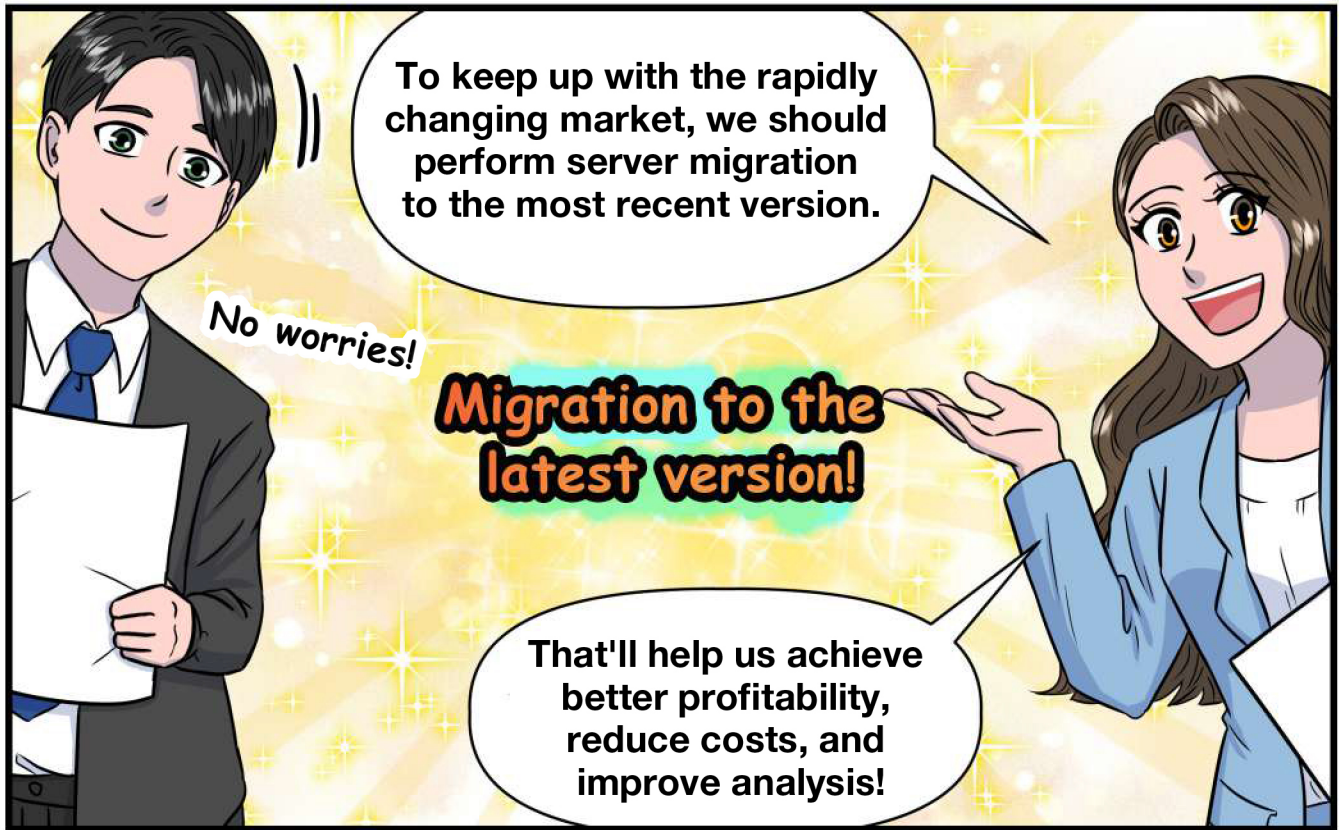

Extension of life cycle

Continuous development and function improvement are being made so that there is no inconvenience in the development environment and actual use environment, and the container life cycle has also increased from 18 months to "5 years."

Windows Server 2022 Feature Summary

Use Cases	Key Features	WS 2019 Std	WS2019 DC	WS2022 Std	WS2022 DC	AzStack HCI
Security All-up	Secured Core	-	-	●	●	●
	System Guard for data corruption attacks	-	-	●	●	●
	Secure DNS client over HTTPS (DoH)	-	-	●	●	●
	Secured data at rest and in transit (AES-256 Encryption)	-	-	●	●	●
	Support for TLS 1.3	-	-	●	●	●
Physical Machine	Increased Memory Support (5-level paging support to support larger memory servers)	-	-	●	●	●
Virtualization Server	Virtualization Rights	2 VMs	unlimited	2 VMs	Unlimited	-
	Software Defined Network/Storage	-	○	-	●	●
	Storage Spaces Direct	-	○	-	●	●
	Storage Replica	-	○	-	●	●
	In-place upgrades from WS2012 to WS2021	-	-	●	●	●
Containers	Containers Rights	Unlimited	Unlimited	Unlimited	Unlimited	-
	Hyper-V containers	Limited	○	Limited	●	●
	Faster and small images	○	○	-	●	●
Hybrid	Hotpatch	-	-	-	-	●
	Extended Network	-	-	-	-	●
	SMB over QUIC	-	-	-	-	●

Finally, the license part is the same as before, but there is a change in the Essential Edition so that only 1CPU-10Core can be used.

Sales Guide : Windows Server 2022 and Windows Server 2019

How to win

- Understand your customer's challenges and goals with their current hardware and software. Build the conversation around how modern hardware with a newer version of Windows Server will enable enhanced security, better data analysis, and the flexibility to migrate to the cloud.
- Identify and select features and benefits that resonate because they pertain to identified customer pains.
- Highlight how Windows Server 2022 and Windows Server 2019 offers a complete on-premises to cloud solution.
- Lead with Windows Server 2022. Windows Server 2022 builds on the foundation of Windows Server 2016, offering new and more advanced capabilities

What to avoid?

- Don't openly critique the capabilities of Windows Server 2019. Focus on the value and benefits of upgrading to modern hardware with Windows Server 2022.
- Direct the conversation to Microsoft providing direct business benefits, including enhanced security, better data analysis, and the flexibility of cloud on their terms.
- Make sure the customer understands the direct business impacts by maximizing their technology and infrastructure investments with Windows Server 2022, including higher sales and profitability, lower costs, and better analysis.

Questions to ask your customer

- Do you need more security features beyond just-in-time administration and app locker, such as ATD (advanced threat defender) and shielded VMs for Linux?
- Do your hybrid capabilities extend beyond file synchronizations to Azure and VM projection?
- Are you planning on running both Windows Server and Linux containers?
- How old is your server hardware and what operating system are you using? Have you had to spend money to maintain them recently?
- Are you aware of the security risks associated with outdated hardware and software?

If your customer is deciding between Windows Server 2022 and Windows Server 2019 then...

They can experience improvements in hybrid capabilities, enhanced security, faster innovations of applications, and unprecedented hyper-converged infrastructures when they upgrade to Windows Server 2022.

Frame the story around how Windows Server 2022 is built on the strong foundation of Windows Server 2019, but provides improvements and new features. Highlight how Windows Server 2022 will help their business do more, faster with better insights and performance across their organization.

They can better protect their business data by upgrading to Windows Server 2022 and taking advantage of new security features.

Start by discussing how Windows Server 2022 introduces new security features with an emphasis on three particular areas: protect, detect, and respond. Windows Server 2022 brings in new Shielded VM functionality with VMConnect and Windows Defender Advanced Threat Protections (ATP), which provides preventative protection and detection against attacks.

They understand the importance of transitioning to the cloud, but may not be aware of the new hybrid capabilities that Windows Server 2022 has to offer

Highlight how Windows Server 2022 is the operating system that bridges on-premises and the cloud that provides a hybrid approach not available with Windows Server 2019. The Windows Server 2022 hybrid approach allows them to use Azure to their benefit by helping with the storage migration service, providing system insights, protecting VMs, synchronizing file servers, and providing enhanced AD authentication.

Their developers and IT pros can benefit from Windows Server 2022, which will enable them to build business applications more quickly

Showcase how Windows Server 2022 lets them run both Windows Server and Linux containers. Offering smaller container image sizes which significantly improves the experience of developers and IT Pros who are modernizing their existing applications using containers. In addition, with Windows Server 2022, they can see improvements to WSL, which help Linux users bring their scripts to Windows while using industry standards like OpenSSH, Curl & Tar

They may be able to benefit from a hyper-converged infrastructure (HCI), and Windows Server 2022 will allow them to take advantage of this latest trend in the server industry.

Discuss how Windows Server 2022 will evolve their servers with HCI. This new deployment model allows them to consolidate compute, storage, and networking into the same nodes, resulting in reduced infrastructure costs while getting better performance, scalability, and reliability.
